

# Mr. 3000

## HAS A CYAN ANALOG SOUNDTRACK

“**Mr. 3000**” is the first Buena Vista release to be printed with the new cyan analog soundtrack. Starting on January 1, 2005, all Buena Vista prints worldwide will have cyan dye analog soundtracks.

To play this print of “**Mr. 3000**” your projector must be equipped with a visible **red light** analog reader. Although this change does not directly affect playback of the digital soundtracks, in the event of a digital soundtrack failure, the analog track will have unacceptable sound without a visible **red light** reader. You can expect that with a white light reader the sound will be 12dB lower than the digital track and with an infrared reader you will have no sound.

If your projector is not yet equipped with a **red light** analog reader, you must replace your white light reader or infrared reader prior to exhibiting this print or you will be in violation of the licensing agreement. If you cannot install a **red light** reader prior to presenting “**Mr. 3000**”, you must contact your head film buyer immediately.

Note: The analog track is Cyan in color.
