INSTRUCTIONS FOR ADJUSTING "STRONG ZIPPER CHANGEOVERS"

After installation, screw down the adjustment SCREW located on the top of the Changeover, so that when the Foot Switch is stepped on the Changeover REFUSES to OPEN.

Then BACK OFF this Adjustment SCREW until stepping on the Foot Switch will cause the Shutter to come up to the TOP and just TOUCH the main casting WITHOUT hitting it and REBOUNDED DOWN.

IF this Adjustment SCREW is too loose the SHUTTER will come up with such force that it will hit the main casting or tubing with such force and rebound down, giving the illusion that the shutter has not come up far enough.

After the proper adjustment has been obtained LOCK the Adjustment SCREW by means of the LOCK NUT.

If at any time it is necessary to remove the armature rod that extends through the center of the coil, care should be taken to REMOVE THE BALL BEARING AND TENSION SPRING FIRST.
