VERTICAL SHAFT ASSEMBLY NOTES

G-1801 Vertical Shaft (52-60021) used on:

PR1014, PR1020, PR1030 & 1030HP	before Serial Number 2834
PR1050, PR1060	all
PR2000	before Serial Number 19796

Vertical Shaft Assembly 52-60304 (Page 1-14a) replaced G-1801(Page 1-14b) in October 1998.

Support casting P-1426, as used in the older (52-60021) assembly, was split at the base and used a P-1778 screw to clamp the lower bearing P-1412 in place. Replacement P-1426 castings are not split, but use a beveled snap ring 51-48029 to retain the P-1412 bearing. If ordering a replacement P-1426 casting, include a 51-48029 snap ring. The snap ring must be installed with the beveled surface *down* (flat surface toward bearing).

Governor Assembly G-1800, required for use with the optional Fire Shutter Assembly, remains available for Model PR1014, 1020, and 1030 projectors. This option is not available on PR1060 and PR2000 projectors. Spacer P-7876 is not required on projectors not using the TU2020 lens turret.

The locknut P-1425 is used on both assemblies. It is used to remove endplay and to preload the spring washer(s) P-2964. After assembling the vertical shaft, immobilize the shaft assembly by holding the hub of P-1418 gear with pliers while tightening the P-1425 locknut. Do not overtighten the P-1425 nut, but apply adequate torque to remove endplay and compress the P-2964 spring washer(s).

PARTS LIST ADDENDUM

SIMPLEX PROJECTORS AND SOUNDHEADS manufactured prior to January 1990 employed .200" Pitch ("square-tooth") timing belts and their corresponding pulleys in the drive train. Drive components for current production (5mm, "round-tooth") are detailed in this book, and in the current 5 Star manual. Strong International will continue to stock replacement parts for the older drive train; please refer to the following chart when ordering parts for older Simplex equipment.
